**Technatomy Corporation Supports the Department of Transportation Federal Transit Administration
FAST-SAFETEA Program**

(FAIRFAX, VA. October 15, 2008) - Technatomy Corporation announced today that it has been awarded a contract with the Department of Transportation's Federal Transit Administration (FTA) to provide Application Development Support Services for the Formula Apportionment System to the Safe, Accountable, Flexible, Efficient Transportation Equity Act (FAST-SAFETEA). Technatomy provides application development and user support services for the apportionment software used by selected FTA employees who administer the program.

Billions of dollars are apportioned to the FTA to fund programs authorized by Congressional transit legislation. For many of these programs the funds must be apportioned to urbanized areas and States using formulas prescribed in law. FAST-SAFETEA is used by FTA to apportion over \$6 billion annually to specified areas of the United States and U.S. territories. The formula for each program uses multiple factors in the apportionment calculation. With advanced skills in computer programming and microcomputer processing operations, our personnel are developing the apportionment applications and the user interface necessary to execute the program.

In 2005, Technatomy Corporation became the first Service Disabled Veteran Owned Small Business to win a competitive SDVOSB set-aside contract at FTA. "Technatomy is pleased to continue its support of the FTA" said Nadeem Butler, CEO of Technatomy Corporation. "Our support for this program will help speed critical transportation funds to local governments and provide for an improved transportation infrastructure to those communities."

This contract award continues Technatomy Corporation's support of government agency application development, Information Technology and website support efforts, and Program Management expertise. Technatomy Corporation is headquartered in Fairfax, VA.
